

in transition, CH₄ fluxes were highest in the wettest muddiest places. Tree 1+8 are higher elevation

EDT

Synoptic - monthly sampling		Event: 2022 summer [month JULY]		General Notes/Observations:				
Measurement: Tree Fluxes [CH ₄] and [CO ₂]		Instrument: <i>Larje</i>		<i>Instrument + is 15 min later than watch eg 9:37 = 9:50 instrument time</i>				
Collection Date:		Personnel: <i>Ward</i>						
Site	Zone	Tree ID	Gas well (x)	Start Time	End Time	CO ₂ (ppm/s)	CH ₄ (ppb/s)	Notes
Crane Creek	upland	301	6 X	14:30	14:36	1.415	0.017	CH ₄ = 0.017
Crane Creek	upland	302	7 X	14:43	14:48	0.388	-0.041	
Crane Creek	upland	303	8 X	14:52		0.767	0.024	
Crane Creek	upland	304	2 X	13:45	13:48	1.544	0.041	113:24 measurement - rain
Crane Creek	upland	305	1 X	13:07	13:17	0.46	0.051	Beginning bad leaks
Crane Creek	upland	306	3 X	13:54	13:58	2.496	0.043	
Crane Creek	upland	307	4 X	14:05	14:16	1.190	0.012	
Crane Creek	upland	308	5 X	14:16		0.752	0.046	
Crane Creek	transition	309	7 X	11:10	11:14	0.861	0.066	maybe a leak?
Crane Creek	transition	310	5 X	10:48	10:51	2.678	2.059	
Crane Creek	transition	311	4 X	10:25	10:28	1.597	2.953
